

Function Block Parameters: fft

fft (mask) (link)

Parameters

Size of FFT: (2[?])

4

Input/Output Bit Width

18

Coefficient Bit Width

18

Number of Simultaneous Inputs: (2[?])

1

Quantization Behavior: Truncate

Overflow Behavior: Wrap

Add Latency

1

Mult Latency

3

BRAM Latency

3

Architecture: Virtex2Pro

Optimisation Target: Multipliers

Number bits above which to store stage's coefficients in BRAM (2[?] bits)

8

Number bits above which to store stage's delays in BRAM (2[?] bits)

9

☐ Specify multiplier use (behavioral HDL if not specified)

☐ Use DSP48s for adders
